

Careers connected to habitats:  
deep sea diver, explorer, gardener

## Sticky Learning

### (What I already know)

- I know that living things **grow**, **move** and **need food and water**.
- I know that animals are **alive**, unlike toys or objects.
- I know that living things can be grouped into **plants** and **animals**.

I can recognise:

\*Common animals (dog, cat, bird, fish, cow, rabbit, etc.)

\*Animals have **body parts** such as legs, wings, tails, eyes, ears.

\*Animals can move in different ways (run, swim, fly, hop).

I know that some places are **hot**, some are **cold**, some are **wet**, some are **dry**.

I know that

- certain animals come from **other countries** (e.g., lions in Africa, penguins in cold places).
- some animals are only found in the **wild**, not as pets.
- some animals live on land, some in water.

## New Knowledge

1. Learn about habitats

2. Appreciate that environments are constantly changing

3. Explore the rainforest and its problems

4. Describe life in the ocean

5. Discover the Arctic and Antarctic habitat

6. Create a model of a habitat

### Habitats

- A habitat is a place where organisms live.
- A microhabitat is a small area within a habitat which differs somehow from the surrounding habitat.

### How habitats change

- Cutting down forests
- Polluting land and water
- Taking away resources

If a habitat changes too much, it can cause the animals that live there to become endangered or extinct.

### The rainforests

Rainforests are rich in biodiversity. They contain lots of helpful resources to help us make food, clothes and medicine. It is important to protect the rainforests.

### Examples of habitats

desert

rainforest

ocean

wetlands

### Ocean life

coral reef

plankton

stingray

turtle

### The Arctic and Antarctic

- Tundra ecosystems are treeless regions found in the Arctic.
- Polar animals – like polar bears – have adapted by having thick fur or feathers.
- Polar bears, narwhals, caribou, seabirds and indigenous peoples live in the Arctic.

Match up the animal with its habitat.

Ocean

Arctic

Desert

What is in the picture?

- A stingray
- A coral reef
- A beach

How might an animal adapt to live in a polar region?

- Eating fish
- Big nostrils
- Living underwater
- Thick fur

Draw a picture to show what is happening to the rainforests.

When a plant or animal has died off and there are none left, we say they are \_\_\_\_\_. This happened to the \_\_\_\_\_ millions of years ago.

Rocket Words

organism	a living thing made up of one or more cells and able to carry on the activities of life
rainforest	a forest in a tropical area that receives a lot of rain
endangered	animals or plants that may soon not exist because there are very few left alive
biodiversity	a variety of plant and animal life in a particular habitat or place
ocean	a very large area of sea; they cover 70% of the world's surface
ecosystem	an area where animals and plants live, and where they rely on one another to survive
desert	an area, often covered with sand or rocks, where there is very little water and not many plants
Arctic	the northern polar region
