# The Internet

## Sticky learning

- How digital devices connect to the internet using routers and networks.
- How computer networks are used to share information.

## New Knowledge

- I know networks physically connect to other networks through routers.
- I know network devices make up the internet and the internet provides services.
- I know websites are shared via www. and the type of media that is stored on the www. (e.g. videos, websites and images)
- I know how content is accessed on the internet through searches.
- I know anyone can add content to the internet and this means it is not always accurate.

## Key Vocabulary

Network	A group of interconnected computers, devices, or nodes that can communicate and share resources with each other.
Internet	A global system of interconnected computer networks that link devices worldwide.
Routers	Devices that forward data packets between computer networks, directing traffic on the internet.
World Wide Web	It is a collection of web pages accessed through web browsers.
Websites	Collections of related web pages and multimedia content that are identified by a common domain name and are hosted on a web server.
Devices	Electronic tools or machines, such as computers, smartphones, tablets, and smart appliances, that can connect to networks and the internet.
Upload	Sending files, images, videos, or other types of content to the internet or a network.
Content	Information, media, and experiences available on the internet or other digital.
Online	When something connected to a network or the internet.
Sharing	The act of distributing or giving access to digital content.
Misleading	Providing false or deceptive information.
